ABOUT ME

I am a Software Engineer with 2+ year of professional experience building and maintaining Python-based backend systems and Odoo ERP solutions at Aktiv Software. I genuinely enjoy the hard parts of software — hunting down tricky bugs, designing clean backend logic, and automating away manual work. I am equally comfortable writing Python scripts, customising Odoo modules, and talking directly with clients to understand what they actually need. I thrive working independently and am experienced in remote-friendly workflows using Git, Slack, and Notion.

TECHNICAL SKILLS

Backend	Python, Django, Flask (basic), REST APIs, OOP, automation scripts, task schedulers
Odoo / ERP	Module development & customization, QWeb reports, version migration (v13–v19), bug fixing
Frontend	HTML5, CSS3, JavaScript, jQuery, Bootstrap — responsive, mobile-first layouts
Databases	PostgreSQL (queries, joins, triggers, indexing), SQL, PGAdmin
Other	Java, PHP
Tools	Git, GitHub, Postman, VS Code, PyCharm, Jupyter Notebook
Remote Stack	Slack, Zoom, Notion, GitHub — comfortable in async & remote-first environments

WORK EXPERIENCE

Junior Software Engineer

Jan 2024 – Present

Aktiv Software · Ahmedabad, India

Working as a full-time developer responsible for Python backend work, Odoo ERP customisation, REST API integration, and direct client collaboration. I handle everything from requirement gathering to deployment and post-release debugging.

Python & Backend Development

- Built and optimised backend modules in Python, improving application performance by 80% through code refactoring and query optimisation.
- Integrated multiple third-party REST APIs, enabling real-time data exchange between client systems and Odoo.
- Wrote custom Python automation scripts that eliminated repetitive manual tasks, saving significant developer time each week.
- Designed schedulers and background jobs to handle periodic data processing without human intervention.

Odoo ERP Development

- Migrated 30+ Odoo modules across major versions with zero compatibility issues — carefully handling model changes, field deprecations, and view updates.
- Customised core Odoo modules (Sales, Purchase, Inventory, Website, POS) to match client-specific business workflows.
- Developed dynamic QWeb report templates that gave clients clear, formatted business intelligence on demand.

Client Collaboration & Communication

- Worked face-to-face with business consultants and end-clients to gather requirements, demo features, and iterate based on feedback.
- Provided technical training to client teams on newly deployed Odoo features, ensuring smooth adoption.
- Coordinated with cross-functional teams across development, QA, and consulting throughout the project lifecycle.

EDUCATION

B.E. Computer Science & Engineering *2022 – 2025*
L.J. Institute of Engineering & Technology, Ahmedabad

Diploma in Computer Engineering *2019 – 2022*
Gujarat Technological University

PERSONAL PROJECTS

These projects were built independently to solve real problems and deepen skills across Python, Django, OpenCV, SQL, and web development.

Car Sensing System · *Python, OpenCV*
- Detects overspeeding vehicles by analysing video frames in real time — useful for traffic monitoring and law enforcement automation.
- Automatically captures and stores image evidence when a speed threshold is exceeded, with no manual intervention required.

Data Analysis Dashboard · *Python, Pandas, Matplotlib*
- Built an analytics dashboard that processes sales data and visualises KPIs, product trends, and revenue breakdowns.
- Designed for business users who need clear insights without writing SQL — all driven by Python data pipelines.

Voting System · *Python, PostgreSQL*
- Implemented a secure digital voting platform with user authentication, tamper-resistant vote storage, and live result analytics.
- Focused on data integrity — every vote is validated, logged, and queryable without exposing raw records.

Fab Grocery — E-Commerce Website · *HTML, CSS, JavaScript*
- Designed and built a fully responsive e-commerce front-end with a product catalog, search, and cart system.
- Practised mobile-first UI/UX principles — consistent layout across all screen sizes without any framework dependencies.

Voice Recorder Web App · *Django, JavaScript*
- Built a browser-based audio recorder where users can record, save, replay, and manage audio files — all from a Django backend.
- Handles file storage, session management, and media serving securely through Django's file handling system.

Quiz Application · *Python, JavaScript*
- Created a multiple-choice quiz engine with real-time scoring, instant answer feedback, and a results summary.
- Delivered in two versions — a Python CLI for terminal use and a JavaScript web version for browser access.

CERTIFICATIONS & COURSES

- Geoprocessing with Python — *ISRO*
- Crash Course on Python — *Google*
- Data Structures — *Skillzcafe*
- Full Stack Web Development — *Coursera*
- Python Basics — *Infosys Springboard*
- Group Discussions — *TCS iON*

WHAT I BRING

- Strong debugging instinct — I don't stop at symptoms, I find root causes.
- Backend-first mindset — I default to clean, maintainable server-side logic.
- Client-facing experience — I can translate technical work into plain language.
- Remote-ready — self-directed, async-comfortable, and deadline-driven.
